

Educational Background

- Fall 2024 **M.Sc. in Physics**, *University of Victoria*, Victoria, Canada.
◊ **Thesis Advisor:** Prof. Kristan Jensen.
◊ **Thesis Title:** Quantum virtual cooling via many-body holographic systems.
- 2019 - 2023 **B.Sc. in Honours Physics**, *McGill University*, Montréal, Canada. (GPA: 3.84/4.0)
◊ **Thesis Advisor:** Prof. Keshav Dasgupta.
◊ **Thesis Title:** de Sitter space compactifications in type II string theory and M-theory. 

Research Experience

- Present **Researcher**, *University of Victoria*, Victoria, Canada
Studying strongly correlated phases in quantum many-body systems for accessing lower temperature regimes in quantum measurements. We make use of the holographic framework of AdS/CFT to understand and perform quantum tasks more efficiently through quantum algorithms with a path integral formulation.
Supervisor: [Prof. Kristan Jensen](#)
- Present **Head of Quantum Software**, *BTQ*, Vancouver, Canada
Using persistent homology and topological data analysis techniques to make consensus protocols more robust in post-quantum cryptographic applications. We characterize the autonomous evolution and interaction of consensus networks by studying their topology at different grained length scales.
Collaborators: [Prof. Gavin Brennen](#), [Dr. Peter Rohde](#)
- 2023 - 2024 **Researcher**, *Fudan University*, Shanghai, China
Using topological quantum neural networks to address the issue of generalization in deep neural networks and make quantum algorithms more efficient. We characterize the networks with the use of topological quantum field theory, a monoidal functor from the (∞, n) -category of cobordisms to the category of vector spaces.
Supervisors: [Prof. Antonino Marcianò](#), [Prof. Emanuele Zappala](#)
- Summer 2023 **Undergraduate Researcher**, *NSERC, University of Alberta*, Edmonton, Canada
Study of topological wormholes and their symplectic entanglement structure in quantum mechanics. We related wormholes to quantum tunneling events in entangled networks of qubits in potential well lattices with the use of instanton solutions in the complex time plane. 
- 2022 - 2023 **Honours Bachelor Thesis**, *McGill University*, Montréal, Canada
Study of the problematic non-existence of vacua with de Sitter isometries occurring in type II string theory and M-theory. We studied generalized coherent states over supersymmetric Minkowski space with these isometries to allow for non-singular compactifications to the de Sitter spacetime, a candidate to model our Lorentzian universe.  
- Summer 2022 **Undergraduate Researcher**, *NSERC, McGill University*, Montréal, Canada
Characterization of U(1) topological defect — cosmic string — signals occurring in a class of renormalizable quantum field theories. We developed statistics to extract these signals from primordial Λ CDM background noise in 21cm inflationary cosmology.  
- Supervisor: [Prof. Robert Brandenberger](#)

- Spring 2022 **Undergraduate Researcher**, *McGill University*, Montréal, Canada
 Study of the interaction of light and the dynamical Casimir effect occurring in photon recycling via scalar quantum field theory. We computed the quantum corrections to the radiation force with loop diagrams using a spatially-dependent interaction vertex and relativistically moving boundary conditions for the mirrors.  
- Fall 2021 **Undergraduate Researcher**, *McGill University*, Montréal, Canada
 Numerical computations of scintillation densities for fast radio bursts and their corresponding black-white hole tunneling events in quantum cosmology. The fast radio burst signals are embedded in non-linear cosmological noise given by primordial perturbations. 
- Summer 2021 **Undergraduate Researcher**, *McGill University Health Center*, Montréal, Canada
 Construction and training of models administering tumour suppressing radiation with neural networks. We investigated dose volume tensor estimation models with helically distributed electromagnetic waves. 
- Summer 2020 **Undergraduate Researcher**, *SURA, McGill University*, Montréal, Canada
 Study of γ -rays and Cherenkov radiation in superluminous supernovae and tidal disruption events with the NASA Fermi-LAT: Unbinned/binning likelihood analyses, upper limit analyses, extended source analyses. 
- 2018 - 2019 **Undergraduate Researcher**, *Vanier College*, Montréal, Canada
 Numerically solved the quantum Hamilton-Jacobi equations of motion and generated trajectories for de Broglie-Bohm theory with recurrent neural networks and the Crank-Nicolson method.  
- Summer 2018 **Undergraduate Researcher**, *Concordia University*, Montréal, Canada
 Study of topological confinement in a nanobeam microcavity. We characterized resonant modes of electromagnetic waves in nano-scale photonic crystal ring resonators with MIT Electromagnetic Equation Propagation. 
- Supervisor: **Prof. Pablo Bianucci**

--- Presentations

- July 2023 **8th Interstellar Symposium**, *McGill University*, Montréal, Canada
 Presented the effects of light interference and the dynamical Casimir effect in photon recycling via scalar quantum field theory. 
- May 2019 **Physics & AI Workshop**, *McGill University*, Montréal, Canada
 Presented numerically computed quantum Hamilton-Jacobi trajectories for de Broglie-Bohm Theory using recurrent neural networks and the Crank-Nicolson method.  

--- Awards and Distinctions

- Fall 2024 **NSERC CREATE - Quantum Computing Program Scholarship**, *University of Victoria, Department of Physics*.
- Fall 2024 **BCGS - British Columbia Graduate Scholarship**, *University of Victoria, Department of Physics*.
- Fall 2024 **UVic FGS - University of Victoria Fellowship - Master's**, *University of Victoria, Department of Physics*.
- May 2023 **NSERC USRA - Undergraduate Student Research Award + FRQNT Scholarship Supplement**, *University of Alberta, Department of Physics*.

- May 2022 **NSERC USRA - Undergraduate Student Research Award + FRQNT Scholarship Supplement**, *McGill University, Department of Physics.*
- May 2021 **BSA - Banner Student Award**, *McGill University Faculty of Medicine, Medical Physics Unit.*
- May 2020 **SURA - Science Undergraduate Research Award**, *McGill University, Department of Physics.*

Relevant Extracurricular Activity

- 2022 - 2023 **Group Seminar**, *Superstring Theory*, Organized a graduate seminar on superstring theory based off modern HEP research papers and textbooks by Kiritsis, & Polchinski.
- Spring 2022 **Group Seminar**, *Gauge Theory*, Organized a graduate seminar on non-abelian gauge theory based off Baez's *Gauge Fields, Knots and Gravity* textbook, as well as Kibble's *Classification of Topological Defects and Their Relevance to Cosmology* paper.
- Fall 2021 **Physics Hackathon**, *McGill University*, Montréal, Canada
Numerically reproduced the interference pattern in the double slit experiment with path integrals using the Metropolis-Hastings algorithm and Glauber dynamics for the Markov chain Monte Carlo method. 🐱🐱
